The full model fit the data within acceptable limits. The chi square was significant for women ($\chi^2 = 55.51$, 10 df, p = .00) but nonsignificant for men ($\chi^2 = 14.15$ 10 df, p = .17). The CFI was 0.94 for women and 0.98 for men. The TI_t was 0.92 for women and 0.98 for men. The model

ing. Other findings indicate that historical loss is much on the minds of some American-Indian adults, and they attribute negative emotional responses to it (Whitbeck et al., 2004). Alcohol may serve to reduce intrusive thoughts or

	of Applied Studies). National Household Survey on Drug Use Report:	nary Explorations, New York: Oxford Univ. Press, 1999, pp. 71-100.
